Type: **1st and 2nd weeks (Hadron structure and interactions)**

## Structures of exotic hadrons from heavy ion collisions

*Tuesday, October 15, 2024 11:00 AM (1 hour)*

Recently the productions of exotic hadrons are interested not only for pp and ee collisions, but also for relativistic heavy ion collisions. The latter can be regarded as the factory for producing exotic hadrons from light to heavy flavors. Especially, the inner structures of exotic hadrons can be sensitive to the production process, and more information may be obtained by researching exotic hadrons in heavy ion collisions. In this talk, I will survey the recent development and introduce our recent work on the light/heavy flavor exotic hadrons.
